

# ACSME 2023

## Tasmania

30 August – 1 September

### 2023 Conference theme: The changing climate of science education

The theme alludes to the rapidly changing environment in which educators from all STEM disciplines operate, with disruption caused by the pandemic exacerbated by rapid technological change. While this has provided many benefits, there are also new challenges including academic integrity, equity and the rise of generative artificial intelligence and its impact on our students and teaching practices. The theme also alludes to the role of STEM educators in building knowledge and capacity about climate change and sustainability more broadly.
